PATIENT NAME: Miss kritika karnani SEX: FEMALE PATIENT ID: 110-9810

AGE: 25 Years **DATE OF BIRTH: 25-12-1996** ACCESSION NO: 110-9810 DRAWN: 12/06/2022 13:17 p.m. RECEIVED: 14/06/2022 13:00 REPORTED: 14/06/2022 13:15 a.m.

REFERRING DOCTOR: DR. Amit Mishra CLIENT PATIENT ID : DI:00110-9810

CLINICAL INFORMATION:

UHID:00110-98 REQNO - 150 / ct. OPD- DL-DI Medical College Jaipur

Test Report Status : <u>Final</u>	RESULTS	Biological Reference Interval :Units
-----------------------------------	---------	--------------------------------------

Interpretation: **Positive for COVID-19**

ORF lab: Detected CT Value: 26.58 N,S Gene: Detected CT Value: 27.55

SARS COV -2 REAL TIME PCR

Interpretation(s)
SARS COV -2 REAL TIME PCR-

SARS-CoV-2, formerly known as 2019-nCoV, is the causative agent of the coronavirus disease 2019 (COVID-19). Main symptoms of the disease include fever, cough and shortness of breath. The virus is spread via person-to-person contact through respiratory droplets produced when a person coughs or sneezes. The SARS-CoV-2 RNA is generally detectable in nasopharyngeal/oropharyngeal swabs during the acute phase of infection. Positive results are indicative of active infection. Real Time PCR assay targets specific genes and can be used for diagnosis of SARS-CoV-2 virus infection which contributes to severe upper respiratory distress, complications

Detected result is considered a positive test result for COVID-19. This indicates that RNA from SARS-CoV-2 was detected, and the patient is considered infected with the virus and presumed to be contagious

Not Detected test result for this test means that SARS-CoV-2 RNA was not present in the specimen above the limit of detection.

Limitations:

- · Negative results do not preclude COVID-19 and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical
- observations, patient history, and epidemiological information.

 Positive results but do not rule out bacterial infection or co-infection with other viruses
- Optimum specimen types and timing for peak viral levels during infections caused by 2019-nCoV have not been determined. Collection of multiple specimens (types and time points) from the same patient may be necessary to detect the virus.
- If the virus mutates in the rRT-PCR target region, 2019-nCoV may not be detected or may be detected less predictably. Inhibitors or other types of interference may produce a false negative result.

 • The performance of this test has not been established for monitoring treatment of 2019-nCoVinfection.

Note: Test is performed using ICMR approved Kit.

CONDITIONS OF LABORATORY TESTING & REPORTING

- 1. It is presumed that the test sample belongs to the patient named or identified in the test requisition form.
- 2. All Tests are performed and reported as per the turnaround time stated in the SRL Directory of services (DOS).
- 3. SRL confirms that all tests have been performed or assayed with highest quality standards, clinical safety & technical integrity.
- 4. A requested test might not be performed if:
- a. Specimen received is insufficient or inappropriate specimen quality is unsatisfactory
 - b. Incorrect specimen type
- c. Requestfor testing is withdrawn by the ordering doctor or patient
- d. There is a discrepancy between the label on the specimen container and the name on the test requisition form $\frac{1}{2} \int_{\mathbb{R}^{n}} \frac{1}{2} \left(\frac{1}{2} \int_{$

- 5. The results of a laboratory test are dependent on the quality of the sample as well as the assay technology.
- 6. Result delays could be because of uncontrolled circumstances. e.g. assay run failure.
- 7. Tests parameters marked by asterisks are excluded from the "scope" of NABL accredited tests. (If laboratory is accredited).
- 8. Laboratory results should be correlated with clinical information to determine Final diagnosis.
